

Packs HELP

- Define a Packs array in the main component

```
packs;
```

- Set this to the data read from the service.

```
this.packs = data
```

- Display this data in the template

```
{{ packs | json }}
```

- Create a new component which holds 1 pack

```
ng generate component pack
```

- In this component, define an Input:

```
@Input() pack : Pack;
```

- In the main template, write an ngFor iterator which creates packs.

```
<app-pack *ngFor="let p of packs" [pack]="p">  
</app-pack>
```

- Create the pack component template:

```
<section class="pack">  
    
  <p>{{ pack.name }}</p>  
  <p>{{ pack.description }}</p>  
  <p>{{ pack.price }}</p>  
  <p>{{ pack.code }}</p>  
</section>
```

- In the pack component, use its parents CSS:

```
styleUrls: ['../app.component.css']
```
